

Case Study

Watkin Road

BARRATT
— LONDON —

Project Overview

With iconic views of the world-famous Wembley Arch, we were thrilled to be appointed as the main glazing sub-contractor this new high-rise mixed use development at Watkin Road.

Working with our long-term clients, Barratt London, the project involved the re-development of a brownfield site which was formerly used as a vehicle repair workshop.

The area around the National Football Stadium is rapidly being transformed into a sought after residential hub, ideally suited for young professionals looking for an easy commute into the city centre.

The complex project required us to design, supply and install a mixture of curtain walling, bespoke balustrades and windows as part of a façade package worth in excess of £1.8m. Made up of 600m² curtain walling and 2900m² of windows, the new development has created 217 homes, of which 67 will be affordable, and will also benefit from hundreds of square metres-worth of workspace.

Digital Innovation

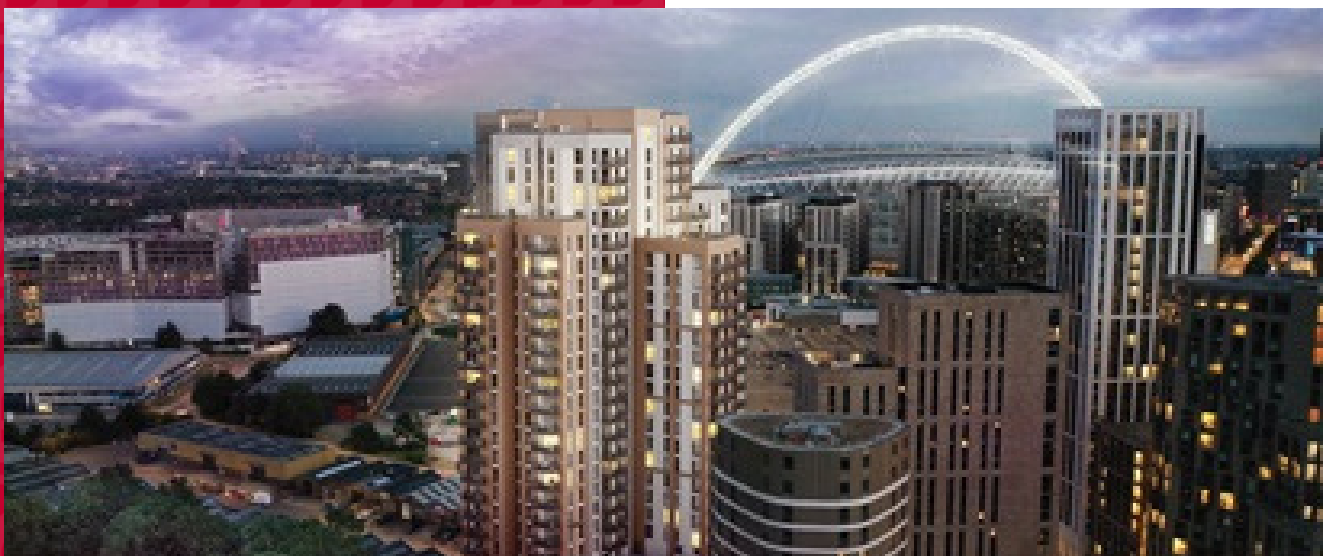

As part of this project, the Barratt London team fully embraced our revolutionary adaptation of Field View and our unique end-user QR code quality tracker.

Working alongside our digital transformation partners RED Jam, we have invested heavily in new technology to help improve onsite efficiencies and post-scheme customer care delivery across all of our units.

"Working with the team from RED has been an absolute pleasure since the get-go. The whole team are 100% service driven, with clear communication and they really worked as part of the team. Great to see RED senior management onsite regularly too. A really hands-on and efficient team".
